This article has been retracted at the request of the corresponding author.

During the initial submission process, the author declared that there were no conflicts of interest and confirmed that the manuscript complied with the journal's submission requirements. However, after publication, the corresponding author informed the Editorial Office that the article had been submitted and published [1] without obtaining the necessary permission and/or approval from the author's affiliated institution, as required by the institution's policies. The author therefore requested that the published article be withdrawn from the scientific record.

After reviewing the request and the supporting information provided by the corresponding author, the Editorial Office determined that the retraction request was justified. Accordingly, the article has been retracted in accordance with the journal's publication ethics and retraction policy.

This retraction is issued to maintain the integrity of the scholarly record. The retraction does not necessarily imply that the research findings are inaccurate or that research misconduct has occurred; rather, it reflects the author's request based on the absence of the required institutional permission for publication.

The journal regrets any inconvenience caused to readers and the scientific community.
